Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30, drawn to an optical scanning probe device having a flexible sheath, a flexible shaft and a housing, classified in class 250, subclass 201.3.
- II. Claims 31-78, drawn to an optical scanning probe having a positioning unit with a scanning light passage hole or marking which indicates the scanning position of the scanning light from the probe, classified in class 250, subclass 559.29.

The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, each of the inventions I and II has separate utility such as stated above. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
